

Hindrances to Research

During my COMP250 class we discussed what can be a **hindrance** to **research** when working on a project. After going around the room and conducting our own research about the topic we came up with nine hindrances to research.

- *Too much **information** that we want to include.*
- *Questions that start to lead to **further questions**.*
- *Not knowing **where to start** your research.*
- *Having language **barriers**.*
- *Using fear as avoidance of **being responsible**.*
- *Not knowing how to **narrow** your research.*
- *Willingness to **adapt** your research when it is needed.*
- *Willingness to be **wrong**.*
- *A sense of knowing that what you write about now can be **accurate** but **later** it may not be as relevant or even **wrong**.*

I have found in many of my research papers I have ended them with questions that I still had. I would go back to a paper that I wrote years ago and found that my view-point has completely changed. I now know that if I want to **excel** in writing I need to focus of these hindrances. I am a **stubborn** person so it may not be easy but I believe that being aware of these hindrances will truly help me in my writing and research.
